

Equivalent Fractions

Equivalent Fractions

- Name the same amount but have different numerators and denominators.

Equivalent Fraction Models

$$\frac{1}{2}$$

=

$$\frac{2}{4}$$

=

$$\frac{3}{6}$$

Equivalent Fraction Models

$$\frac{1}{2}$$

=

$$\frac{4}{8}$$

=

$$\frac{5}{10}$$

Equivalent Fraction Models

$$\frac{1}{2} = \frac{4}{8}$$

Equivalent Fraction Models

$$\frac{3}{4} = \frac{6}{8}$$

Equivalent Fraction Models

$$\frac{2}{3} = \frac{4}{6}$$

To Find Equivalent Fractions

- Multiply the numerator and the denominator by the same number.

$$\frac{1}{3} \times \frac{3}{3} = \frac{3}{9}$$

To Find Equivalent Fractions

- Divide the numerator and the denominator by the same number.

$$\frac{4}{12} \div \frac{4}{4} = \frac{1}{3}$$
